brane-world gravity - springer - brane-world gravity 7 1 introduction at high enough energies, einstein's theory of general relativity breaks down, and will be superceded by a quantum gravity theory. **a new perspective on dgp gravity - arxiv** - brane induced gravity model in 5d (henceforth refered to as dgp gravity, for short) [3] in particular has received special attention, mainly because it gave rise to the self-accelerating (sa) backgrounds. **inflationary scenario on brane universe with induced gravity** - a modified braneworld scenario, called brane induced gravity was first proposed by dvali, gabadadze and porrati (dgp), where the 4d einstein- hilbert term is assumed to be induced on the brane [dvali,l]. **dark radiation and localization of gravity on the brane** - that for $0 < c$ only for q_0 then for r
